

Staff Attack Alarms

An Ascom Enterprise Solution for workplace safety

Towards a safer workplace

Protecting workers from violence is a challenge. With Staff Attack Alarms, you have a reliable solution to quickly raise alarms and respond to them, and help workers feel more secure and confident at work.

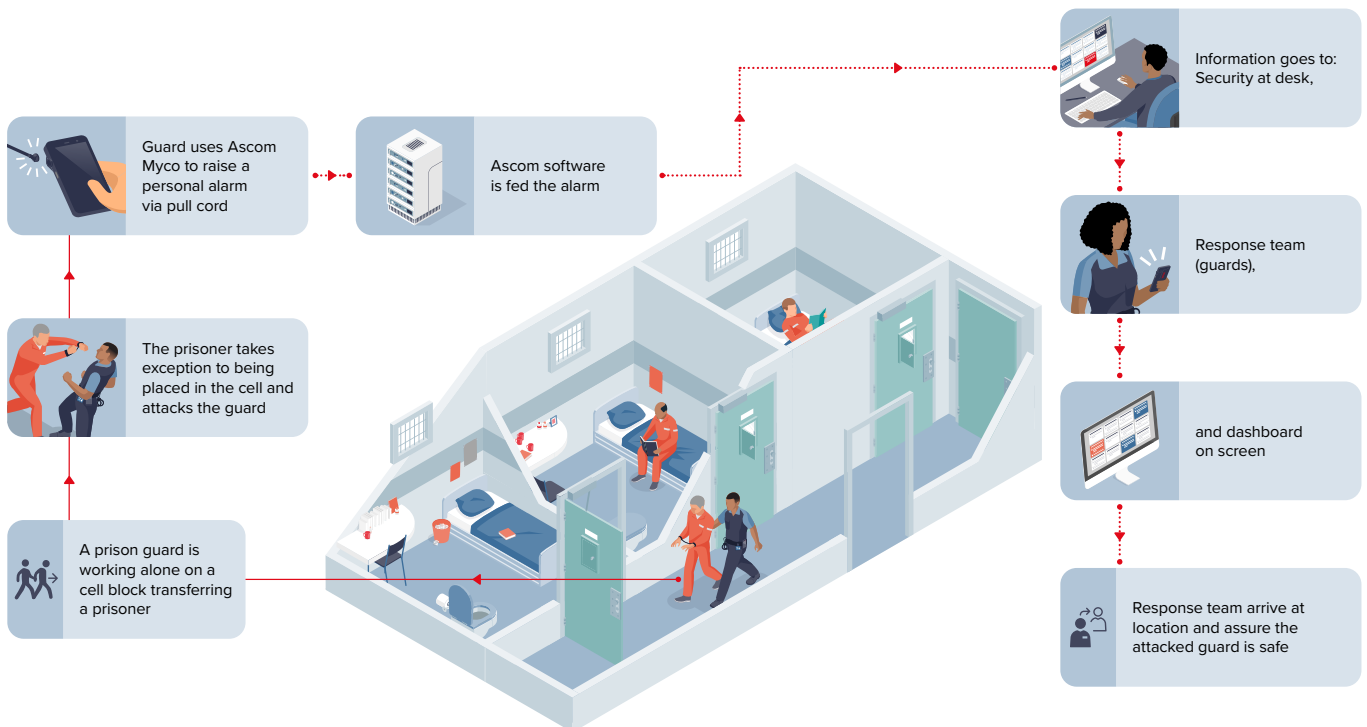

The need for protection

Physical violence at work is a daily risk for many with 1 in 4 workers globally experiencing violence or harassment during their working lives¹. As a result, minimizing risk and maximizing workplace safety is vital to:

- Reduce injuries, illness and deaths
- Make staff feel less threatened and more secure
- Attract and keep staff and reduce turnover
- Avoid operational consequences and costs from attacks
- Prevent illegal breaches of health and safety responsibilities

Staff Attack Alarms solution

When staff are attacked or feel threatened, they have the ability to raise an alarm that quickly and automatically notifies responders to come to their location. Either stopping an attack or preventing it from happening in the first place, and giving at-risk workers the confidence that help is never far away.

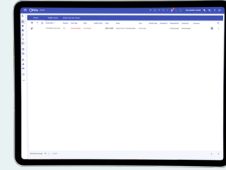

Key features

The Staff Attack Alarms solution is based on mobile devices with in-built staff safety features such as panic buttons, real-time location technologies, alarm dashboards, incident mapping and mobile response workflows. All to ensure responders can react to a staff attack incident as quickly as possible.

Mobile Alerting

List View of current alarms

- System that adapts to your way of working
- Open system via API and ability to connect to other systems
- Seamless integration with other alarm sources and contextual information
- Panic buttons available on a range of devices to suit your workplace
- Wide range of location technologies from IR and LF to DECT location
- Supports GPS location and mapping for wide area applications
- Supports location services from third-party vendors (BLE/Wi-Fi) maximizing ROI of existing technology
- Multiple options for support for mobile response workflows
- Configurable alarm dashboards — from simple list view to interactive map
- Enhanced logging and reporting of the complete trail in one view

Software and licences

The solution is based on Ascom Ofelia enterprise alarm and workflow management software. Ofelia software enables you to integrate with third-party systems for features such as location services and external alarm presentation, while it is HTML5-enabled to allow user access from any PC or screen.

Solution components

Mobile Devices	Item	Part No.
Pagers	a72	CHAT-XXXXXX
